ADITYA UNIVERSITY

Department of Computer Science and Engineering
Academic Year (2026-27)

Date of the Review	28-09-2026
Domain of the Project Work	Machine Learning
Confirmed Title	CareerIQ— Intelligence System& Placement Assistant
Motivation	Students often struggle to understand whether their resumes match a job, identify missing skills, find suitable opportunities, and keep track of placement registrations, tests, interviews and deadlines. CareerFit was selected to integrate these activities into one personalized AI-based career assistant. The project combines resume analysis, skill-gap identification, resume improvement, job matching, placement-readiness estimation, recommendations, opportunity monitoring and personalized reminders.
Number of research papers reviewed: 10 Publication period considered: To be finalized Major sources / databases used: IEEE, Springer, Elsevier, ACM, ScienceDirect	
The literature addresses individual problems such as resume/skill analysis, job-resume matching, candidate comparison, placement-related prediction and notification systems. However, students may still need to use separate tools for resume improvement, job matching and tracking placement opportunities. CareerIQ addresses this fragmented workflow by connecting these functions through a common career-intelligence system.	
The main gap identified for the proposed project is the integration of resume intelligence and job matching with proactive opportunity monitoring and personalized reminders in a single student-focused workflow. CareerIQ is positioned as an integrated career assistant rather than only a resume analyzer, while keeping the matching and prediction results explainable and treating placement prediction as an estimate rather than a guarantee.	
Problem Statement: Students need a unified system to understand their current career profile, improve their resume for target roles, identify skill gaps, find relevant jobs, estimate placement readiness, and avoid missing important placement opportunities. Proposed Solution: CareerIQ will analyze the student's profile and resume using NLP/AI, perform ATS-style analysis and skill-gap detection, suggest resume improvements and relevant learning areas, match the profile with job descriptions, provide placement-readiness estimation, and monitor authorized placement-related emails to detect registrations, tests, interviews, shortlists and deadlines and generate personalized alerts.

LITERATURE SURVEY REVIEW

Guide Verification & Consent

☐ Literature survey is adequate and relevant to the proposed project.

☐ Research gap/problem statement is clearly identified.

☐ Proposed solution and methodology are reasonably defined.

☐ Expected outcomes and evaluation criteria are identified.

☐ PPT is verified and approved.

☐ Student is **PERMITTED TO ATTEND THE PROJECT REVIEW**.

Guide's Remarks (if any):

Guide’s Name : Dr. K. Nagaraju

Designation: Department of Computer Science and Engineering

Guide Signature: _____ **Date:** _____

Consent: ☐ YES ☐ NO ☐ REVISE & RESUBMIT
